

Nothing to Fear. Agile, ALM, and the IT Audit

New Webinar from Polarion Software Features Leading Industry Analyst Firm and Guides Agile Development Organizations on Meeting and Exceeding Compliance Demands

Stuttgart, Germany (June 7, 2011) — Organizations following Agile and Hybrid software development methodologies need not fear a visit from an IT auditor, says application lifecycle management (ALM) leader Polarion Software. On June 28, 2011, the company will host a new webinar that outlines the many ways ALM can help Agile organizations meet compliance challenges head on, while also achieving improved performance.

Entitled “**Auditors and Compliance in Harmony with Agile ALM**” the webinar features Forrester Research’s Senior Analyst and ALM expert Tom Grant. Mr. Grant will argue the case that Agile and Hybrid ‘SCRUM-Waterfall’ methodologies are not compliance detractors, but rather, can be accelerators of compliance, and can actually help organizations deliver documented processes and audit trails that exceed an auditor’s expectations. “Compliance is a top of mind issue in the highly regulated markets Polarion serves, such as embedded systems, automotive, medical devices, aerospace, defense, and financial services. This webinar is designed to help software development leaders understand the challenges associated with an IT audit and how best to meet and exceed compliance demands while operating within an agile-driven development environment,” says Frank Schröder, Polarion Software CEO.
