

Polarion® REQUIREMENTS™

INNOVATIVE WEB REQUIREMENTS MANAGEMENT SOLUTION FOR ANY APPLICATION, PROCESS, PRODUCT, OR SERVICE - INCLUDING YOURS

SECURELY AUTOMATE THE PROCESS

Gather, author, approve, and validate requirements with anyone, anywhere, using **your web browser**. Painlessly import requirements from multiple **external sources** such as Word, Excel, DOORs, XML. Maintain bi-directional **synchronization** between Polarion and external sources, or use the Polarion off-line client when web access is not available. Eliminate silos and barriers to reuse by linking or embedding work items, artifacts and content with one click.

PRODUCE FAST RESULTS

Easy as Word to use. Immediate Web 2.0 implementation. Polarion integrates into your existing **workflow** processes, or you may customize templates to create workflow per project, group, or global basis. Legendary **traceability** matrix and impact analysis tracks and automatically measures the multi-directional relationship and interdependencies between requirements and any work item or artifact throughout the lifecycle. Suspect links keep all stakeholders **aware of a change** before it occurs to manage risk.

FULLY AUDITABLE AND SECURE

Automatic change control of every requirement from inception through reuse, derivatives, and archival. Pass any **audit, compliance**, or regulatory inspection with traceability that is maintained, managed and guaranteed. Infinite levels of security selectable by role, user, project, group, or LDAP. **Easy setup** and browser based administration on Windows® or Linux servers. **Link** with your existing testing, tracker, or task management tools or use powerful built in features of Polarion.

COLLABORATE WITH EASE

Online Documents, Integrated Wiki and notification for easy **collaboration with Customers**, Sponsors, Development, Testing, QA, Marketing, Partners, and Sales. Current version, any iteration or baseline is **always available** to all stakeholders. Embed graphics, video, and other rich media to **communicate visually**. Comprehensive search and query can display any **report**, in a wiki dashboard, or export system-managed requirements to formats like DOORs, Word, Excel, XML and PDF.

“

Working with Polarion Requirements has enabled us to consolidate the application lifecycle from several disparate systems for our client. We've seen **cost and time reductions** around requirements management and software maintenance through greater visibility and collaboration.

Darren Mackay,
Principal Consultant & Founder,
Sikkra Pty Ltd.

“

The new document import feature, with the rules to (for instance) tag a paragraph that contains the word "shall" as a requirement is **fabulous**. This will save us a lot of time managing customer and legacy documents.

Keith Roseberry,
Goodrich

“

By supporting standards and intelligent integration of other tools in Polarion we can start our quality process at the research/evaluation period and continue over the whole software lifecycle.

SponTech AG,
Dep. Software Development

Polarion® Software solutions with over **1 Million licensed users world-wide** manage requirements for many kinds of projects in a broad range of industries.

Import Word Documents

Easy linking for traceability and impact analysis

Comments and Discussion online and offline

ONLINE AUTHORIZING WITH "LIVEDOCS™"

The **Polarion Import Wizard** easily recognizes and imports documents that contain requirements, test cases, defects, etc. to a modern, web-based management platform.

- Imported **documents look** and edit exactly **like the source documents**
- **Preview** before import prevents time consuming errors
- **Create professional looking documents** for export. Supports: PDF, MS Word, Excel, XML, HTML
- **Document "RoundTrip"** - Changes made outside of Polarion can be **imported** back seamlessly while keeping your original formatting

TRACEABILITY, VERSIONING, AND AUDIT TRAILS

How do you bring sanity and accountability to the process of gathering, vetting, and implementing the inevitable change requests that happen during every project?

Change Control and Impact Analysis are a vital part of the Requirements Management Process.

- Pass any **compliance audit** easily
- **Determine the potential impact** changes may have on other requirements, release timelines, resource allocations, etc.
- **"Visual Diff"**: You can visually compare the old documents with the new versions and see the changes highlighted
- **Linking** - Ability to link one to many or many to one and do so across projects

REAL TIME COLLABORATION ACROSS TOOLS AND TEAMS

- **Subscriptions** let you select events you want to monitor and be notified of any changes
- Enter and **browse document comments from within Word** documents or from online collaborators
- Read and **sign documents electronically**
- **All aspects of collaboration** such as discussion threads are recorded so you can trace how you came to various decisions

SUPPORT ANY WORKFLOW OR METHODOLOGY

Flexible, Adaptable, Customizable Support for the way you build your software and systems

- **Supports Agile/Lean**, Traditional, Hybrid, or custom environments: FDD, XP, Scrum, RUP, Kanban, etc
- **Attain compliance** with a wide spectrum of industry standards like FDA, FAA, CMMI, ISO, IEC, CPI, SPICE, and many more
- **Customizable Workflow Support** - covers all the artifacts from requirements
